

NASH EnduraSeal® UPGRADE

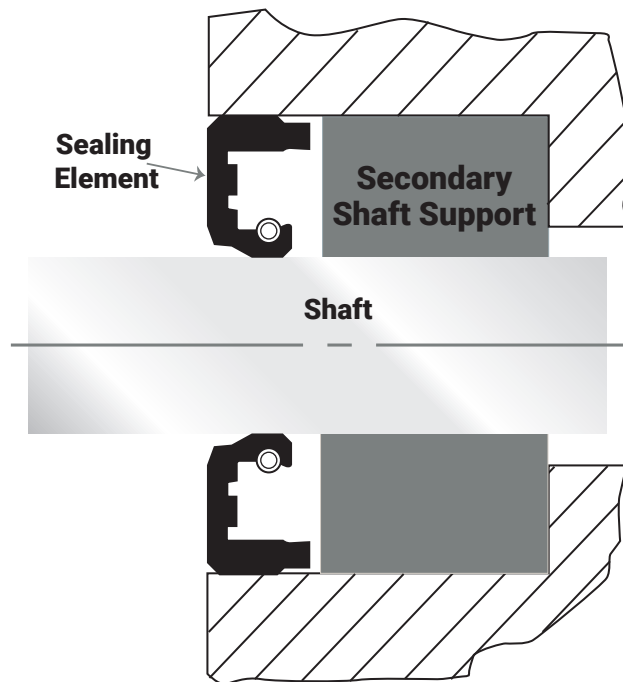

REDUCE SHAFT LEAKAGE & AVOID UNPLANNED DOWNTIME

NASH EnduraSeal offers a better sealing solution by eliminating typical packing leakage at a lower cost than mechanical seals.

Constructed of a proprietary polymer sleeve, the NASH EnduraSeal offers a cleaner, more reliable operation by replacing traditional stuffing box packing. The sleeve offers additional shaft support in the unlikely event of bearing failure, and enhances the support during high load conditions associated with process upsets.

EnduraSeal is available exclusively from Gardner Denver Nash as an upgrade for NASH CL2000 - CL14000 and NASH 904L - 904U liquid ring vacuum pumps.

- Reduces shaft leakage found with traditional packing
- Reduces water migration to the bearing housing
- Reduces environmental and housekeeping issues associated with shaft leakage
- Proprietary sleeve provides supplemental running time if primary bearing fails
- No grease required

Only NASH Certified Service centers are authorized to offer OEM parts, have a complete library of original drawings, and a team of factory trained technicians who can repair and restore your equipment to OEM specifications. With patented upgrades, and 24/7 global service, NASH Certified Service centers are able to provide fast, reliable, and safe service and repair, at a competitive price.

Only NASH Certified™ Service provides the quality, reliability and performance of your original NASH Pump. Guaranteed. [Need repairs done right the first time? You need NASH.](#)
